

Get **MORE** out of your Blueprint OMS with Quickscreen.

Quickscreen is a CareCredit process that enables you to determine if your patients are pre-approved for the CareCredit credit card before they apply, providing you the ability to confidently discuss their available financing options, which can help alleviate cost as a barrier to care.

Benefits of Quickscreen include:

MORE visibility into which patients already have a CareCredit credit card, as well as those who are pre-approved (with no impact to their credit score).

Confidently provide pre-approved patients with **MORE financing options**, which may help alleviate unspoken cost concerns as possible reasons for cancelled appointments or leaving tested-not-fitted.

Highlight how the **CareCredit credit card can help them get the devices** they want and need.
